

MFS 2.0 Release Installation for Red Hat Linux and CentOS x86 Platform

To install the MFS 2.0 package on your Red Hat Linux or CentOS X86 system:

1. Login into the Red Hat or CentOS X86 system as root.
2. Untar downloaded file *TPS_MFS_2.0_Linux_RHEL*.tar
3. list contents from the directory

```
# ls
Documentation      Packages
```
4. Go to the Packages directory
5. Run install

```
# ./Install
```
6. Read the Twin Peaks' "Mirror File System 2.0 System Administration Guide " in the Documentation directory before you begin using MFS 2.0.
7. For the free MyMirror version, the maximum supported file system size is 10 Giga Bytes. You need to use a partition which is 10 Giga bytes or less and create an EXT3 file system on that partition. The license is not required to use MyMirror.
8. For other version, a 30 days trial license is included in the package. There is no restriction on the partition and file system size.
9. You can also send a license request using the license request form to license@TwinPeakSoft.com to request a longer license or contact your sales rep.
10. If you have any problems installing or using the Linux MFS 2.0 package, please call the Twin Peaks support line (510) 438-0546, or send an e-mail to support@TwinPeakSoft.com
